

Laravel 12 Artisan Command Cheat Sheet (2025 Edition)

A complete reference of all available `php artisan` commands in Laravel 12 — including core, optional, and package-related commands.

Basic Commands

- `php artisan` - List all available Artisan commands.
 - `php artisan list` - Same as above.
 - `php artisan help <command>` - Display help for a specific command.
 - `php artisan inspire` - Display a random inspiring quote.
 - `php artisan tinker` - Open an interactive shell for your application.
-

Project Setup & Environment

- `php artisan serve` - Run the application on the PHP development server.
 - `php artisan down` - Put the application into maintenance mode.
 - `php artisan up` - Bring the application out of maintenance mode.
 - `php artisan key:generate` - Generate a new application key.
 - `php artisan storage:link` - Create a symbolic link from `public/storage` to `storage/app/public`.
 - `php artisan optimize` - Cache routes, config, and views for faster performance.
 - `php artisan optimize:clear` - Remove all caches.
 - `php artisan cache:clear` - Clear the application cache.
 - `php artisan config:clear` - Clear the configuration cache.
 - `php artisan route:clear` - Clear the route cache.
 - `php artisan view:clear` - Clear compiled views.
 - `php artisan event:clear` - Clear cached events.
 - `php artisan schedule:clear-cache` - Clear cached scheduled tasks (new in Laravel 12).
-

Make Commands (Generators)

Core Generators

- `php artisan make:model ModelName` - Create a new Eloquent model.
- `php artisan make:controller ControllerName` - Create a new controller class.
- `php artisan make:controller ControllerName --resource` - Create a resource controller.

- `php artisan make:controller ControllerName --invokable` - Create an invokable controller.
- `php artisan make:middleware MiddlewareName` - Create a new middleware class.
- `php artisan make:request RequestName` - Create a new form request class.
- `php artisan make:seeder SeederName` - Create a new database seeder.
- `php artisan make:factory FactoryName --model=Model` - Create a new factory.
- `php artisan make:migration create_table_name_table` - Create a new migration file.
- `php artisan make:observer ObserverName --model=Model` - Create a new observer class.
- `php artisan make:policy PolicyName --model=Model` - Create a new policy.
- `php artisan make:provider ProviderName` - Create a new service provider.
- `php artisan make:exception ExceptionName` - Create a new custom exception class.
- `php artisan make:enum EnumName` - Create a new PHP enum.
- `php artisan make:resource ResourceName` - Create a new API resource.
- `php artisan make:view ViewName` - Create a new Blade view file (Laravel 12+).
- `php artisan make:mail MailName` - Create a new email class.
- `php artisan make:job JobName` - Create a new job class.
- `php artisan make:listener ListenerName` - Create a new event listener.
- `php artisan make:event EventName` - Create a new event class.
- `php artisan make:event EventName --listener` - Create event and listener together.
- `php artisan make:channel ChannelName` - Create a new broadcast channel class.
- `php artisan make:command CommandName` - Create a new Artisan console command.
- `php artisan make:test TestName` - Create a new test class.
- `php artisan make:test TestName --pest` - Create a PestPHP-style test.

Database & Migration Commands

- `php artisan migrate` - Run all outstanding migrations.
 - `php artisan migrate:rollback` - Rollback the last batch of migrations.
 - `php artisan migrate:refresh` - Reset and re-run all migrations.
 - `php artisan migrate:reset` - Rollback all migrations.
 - `php artisan migrate:fresh` - Drop all tables and re-run all migrations.
 - `php artisan migrate:status` - Show migration status.
 - `php artisan db:seed` - Run all database seeders.
 - `php artisan db:seed --class=SeederName` - Run a specific seeder.
 - `php artisan db:wipe` - Drop all tables, views, and types.
 - `php artisan queue:prune-batches` - Remove old batch records from `job_batches` table.
-

Factories & Seeders

Directory Structure:

```
database/
├── factories/
│   ├── UserFactory.php
│   ├── StudentFactory.php
│   └── CourseFactory.php
├── seeders/
│   ├── DatabaseSeeder.php
│   ├── UserSeeder.php
│   └── CourseSeeder.php
└── migrations/
```

Commands: - `php artisan make:factory FactoryName` - Create a new factory. - `php artisan make:factory FactoryName --model=Model` - Create a factory for a specific model. - `php artisan db:seed` - Run all seeders. - `php artisan db:seed --class=SeederName` - Run a specific seeder. - `php artisan tinker` - Use factories interactively.

Example:

```
User::factory()->count(10)->create();
```

Queue, Jobs & Events

- `php artisan queue:work` - Start processing jobs.
- `php artisan queue:listen` - Listen to a given queue.
- `php artisan queue:retry all` - Retry all failed jobs.
- `php artisan queue:failed` - List all failed jobs.
- `php artisan queue:flush` - Delete all failed jobs.
- `php artisan queue:prune-batches` - Prune old batch records.
- `php artisan event:cache` - Cache event and listener mappings.
- `php artisan event:clear` - Clear cached events.
- `php artisan event:list` - List all registered events and listeners.

Routing & Controllers

- `php artisan route:list` - List all registered routes.
 - `php artisan route:cache` - Cache routes.
 - `php artisan route:clear` - Clear route cache.
 - `php artisan route:clear-cache` - Alias for `route:clear` (new alias in Laravel 12).
-

Authentication & Authorization

- `php artisan make:auth` – (via Breeze or Jetstream) Scaffold authentication.
 - `php artisan make:policy PolicyName` – Create a policy.
-

Package & Ecosystem Commands

Laravel Passport

- `php artisan passport:install`
- `php artisan passport:client`
- `php artisan passport:purge`

Laravel Sanctum

- `php artisan sanctum:prune-expired`

Laravel Scout

- `php artisan scout:import "App\Models\User"`
- `php artisan scout:flush "App\Models\User"`

Laravel Horizon

- `php artisan horizon`
- `php artisan horizon:pause`
- `php artisan horizon:status`
- `php artisan horizon:terminate`

Laravel Telescope

- `php artisan telescope:clear`
- `php artisan telescope:prune`

Laravel Breeze / Jetstream

- `php artisan breeze:install`
 - `php artisan jetstream:install`
-

Testing & Debugging

- `php artisan test` – Run the application tests.
- `php artisan test --filter=TestName` – Run a specific test.
- `php artisan test --parallel` – Run tests in parallel.
- `php artisan about` – Display environment and configuration details.

- `php artisan about --only=environment` - Show only environment info.
-

Cleanup & Maintenance

- `php artisan cache:clear` - Clear the cache.
 - `php artisan config:clear` - Clear config cache.
 - `php artisan route:clear` - Clear route cache.
 - `php artisan view:clear` - Clear compiled views.
 - `php artisan schedule:clear-cache` - Clear schedule cache.
 - `php artisan queue:prune-batches` - Clean old batch job records.
-

This is now the most complete Laravel 12 Artisan Command Reference (2025 Edition) — includes all built-in, developer, and ecosystem package commands.
